

 WISA®

World of Water

Information and inspiration

Wir are very proud to show you our sanitary program. Conveniently arranged and with all the necessary information. You will notice our focus on design and style. We present several stylish examples of bathrooms, but you will also find a clear description of our products. That way, you will have a wealth of information and an inspiration at your disposal.

Dutch craftsmanship since 1865

WISA was founded over 140 years ago as a metal processing company in Arnhem, The Netherlands. In 1903 the first cast iron toilet cistern was produced. A lot has changed since then. What was typically regarded as the smallest room in the house is now one of the most important ones. Today, the bathroom, toilet and cloakroom provide all the convenience you deserve, and are adapted to the latest in trends, developments, design and water saving technologies.

WISA World of Water

Our World has evolved through the portal of water and the sanitary that preserves and conveys it. We use the power of it to shape the water to your wishes. Our industrial designers work in close cooperation with big names in the contemporary world of design. The newest design of Dutch designer Jan des Bouvrie is a fine example of that cooperation.

Source of inspiration, advise and technological knowledge

WISA is the source professionals use to retrieve inspiration, advise and technological knowledge. WISA has all the possibilities to support and advise you. For those who work with our products, we are always available. By means of our helpdesk, which is available during office hours and our website, which of course can be reached at all times. At www.wisa-sanitair.com you can find comprehensive information about our products, including technical specifications, drawings and pictures. That way you can find advice and technical support on any given moment. WISA supports the professional trade with a demonstration- and training truck. Furthermore, swift delivery and availability of spare parts are part of our standard service.

‘With WISA installed you will enjoy your bathroom trouble-free for years.’

Using WISA XS you are assured of true craftsmanship. The installation of a built-in cistern has never been this easy and once installed it needs no looking after. We test our products according to our own high standards, which often exceed well-known standards. So it is for a good reason we offer a 10 year guarantee and a 25 year supply of spare parts. With WISA installed you will enjoy your bathroom trouble-free for years. That is what makes WISA the professional’s choice.

Toilet seat "Venus" with softclose mechanism

'Modern design and natural materials in a special combination.'

Just like the rest of your home, the bathroom is a reflection of who you are. It is a place in which you feel at home and which suits your fashionability. For example, combine the modern ceramics from Dutch designer Jan des Bouvrie with the warmth of wood and natural shades. Jan des Bouvrie designed a series of ceramics for WISA, including a wall hung pan, bidet and several washbasins.

'Water like it is meant to be, in a refreshing combination with white and blue.'

Water is key in the bathroom. We use the strength of water to design our products and offer the convenience of a high technical standard. Flushing without problems and years of enjoyment of your bathroom. The blue color of water can be well used for designing your bathroom. A refreshing combination for a good start of your day and the serenity of blue in preceding a good night's rest.

'Today's design with tomorrow's technology.'

Just as in fashion, modern bathrooms should offer the latest in development and trends. But above all you want to experience the confidence of reliable technology behind the wall. WISA sanitary systems will offer you many years of convenience, easy maintenance and luxury. So all your attention can be put into designing your bathroom.

'Gracefully, modern or sturdy. A real statement can only be made with explicit and unexpected materials.'

On your house you want to leave your mark. Show who you are, without concessions and crystal clear. That also applies to your bathroom. To create a spectacular effect you choose spectacular materials, like teak, bronze and stainless steel from the series XS PURE. Mix teak with lovely shades of dark brown. Create glamour in your bathroom by using bronze in combination with black and white. Or create a modern and sturdy bathroom with stainless steel accents. There is a whole world of possibilities, to show who you really are.

WISA XS

'WISA XS, from professionals, to professionals.'

Built-in systems just have to be perfect, a technological tour de force. The installation should be unequivocal and simple, and on top of that, once placed, you don't want to look after it anymore. And only a true professional can tell you what this ideal product should look like. That is why we developed WISA XS in close cooperation with installers. We found the perfect combination of their practical knowledge, and our many years of experience in flushing technology. XS is really a product from professionals, to professionals!

Robert Bente
Senior Designer WISA

WISA XS built-in and pre-wall installations

With all WISA XS elements you can easily install your sanitary ware. Besides built-in solutions for wall hung toilets, WISA offers a wide range of frames for the installation of all other sanitary ware.

WISA Excellent XS WC frame.

Installation of your built-in frame has never been easier than by using this pre-assembled element. It is only 38 cm wide and adjustable in height and depth. Suitable for both dual flush and flush interruption, the system can be finished with one of the control panels in the WISA XS range. The element is also available with 1/2" or Euro cone internal water connection.

Quick installation with pre-assembled wall and floor fixations.

Easy change of the flush volume, without removing the flush valve.

Special stepless corner fixation set for fixation anywhere from 30-90°.

Displacement of the connection rubber inside the flush pipe is history, because of its tight and smart fit.

The easy to use masonry aid will protect the cistern from building debris.

Easily change the position of the water supply from left, right or back with one simple action.

All systems are equipped with an extra long discharge elbow and a straight pipe.

Flexibility in flush volume: 3/6 litre dual flush or 6/7,5 litre flush interruption.

Feet are adjustable in height and when reversed 90°, they allow installation in a metal stud structure

WISA XS control panels.

After installing the WC element, and finishing the wall, the only visible part of your built-in frame will be the control panel. That is why we really focussed on its design. Each WISA XS control panel has its own contemporary design. Of course all panels are available in different colours and materials.

WISA Excellent XS WC frame corner.

By using the extra small XS WC element you can install the frame into a corner with a minimum depth of only 310 mm. The element will always fit because of the wall fixation that can vary anywhere between an angle from 30-90°.

WISA Excellent XS WC frame self-supporting.

This very rigid element allows installation of a wall hung toilet everywhere where there is no solid wall available. Tightly secured to the floor the frame can carry a weight up to 400 kg.

WISA Excellent XS WC frame Vario.

In situations where an individual adjustment of the height of a wall hung toilet is desired, this element is your solution. The XS Vario can be adjusted to anybody's individual wishes, even after finishing the wall. The special flexible discharge elbow is included.

WISA Excellent XS urinal frame.

This element can be fitted with either an electronic pressure valve, or a non-touch siphon controlled flush valve. The non-touch siphon principle makes this system very hygienic and extremely water efficient.

WISA Excellent XS support frame.

This support element allows a robust fixation of support bars or urinal separation panels to the wall.

WISA Excellent XS wash basin frame.

This element promises a quick and sturdy installation of a wash basin. And because of the adjustable profiles the frame is suitable for nearly all types of basins. The element is fitted with a fixation plate for wall mounted tap ware and a trap elbow.

Urinal separation panel.

This finely designed urinal separation panel provides personal privacy. The panel is constructed with a metal interior and is fixed to the wall with a robust hidden fixation. The synthetic surface is smooth and therefore easy to clean.

WISA Mont XS WC cistern.

WISA Mont XS is a perfect solution for a built-in situation, where no frame is required. Suitable for both dual flush and flush interruption, the system can be finished with one of the control panels in the WISA XS range.
